Feed Reader Testing

REVIEW

CODE REVIEW 5

HISTORY

Meets Specifications

Nice work! 🎉

You've done an awesome job with this project. You comprehensively test the functionality of the feed reader application and all tests run as expected.

Good luck with your future projects!

Test Coverage

The required tests for the project (`RSS Feed` testing, `RSS Feed` properties, menu default state, and menu hiding/showing) are all provided and are comprehensive enough to adequately test the functionality.

Tests should be independent of one another.

All required tests for the project pass.

Documentation

A `README` file is included detailing all steps required to successfully run the application.

Comments are present and effectively explain longer code procedures.

Code is formatted with consistent, logical, and easy-to-read formatting as described in the [Udacity JavaScript Style Guide](#).
