# Feed Reader Testing

## REVIEW

## CODE REVIEW 5

## HISTORY

▼ [jasmine/spec/feedreader.js](#) 4

```
1 /* feedreader.js
2 *
3 * This is the spec file that Jasmine will read and contains
4 * all of the tests that will be run against your application.
5 */
6
7 /* We're placing all of our tests within the $() function,
8 * since some of these tests may require DOM elements. We want
9 * to ensure they don't run until the DOM is ready.
10 */
11 $(function() {
12     // rss feeds test suite
13     describe('RSS Feeds', function() {
14         // allFeeds defined and it's not empty
15         it('are defined', function() {
16             expect(allFeeds).toBeDefined();
17             expect(allFeeds.length).not.toBe(0);
18         });
19
20         // allFeeds has a URL and it's not empty
21         it('has url', function(){
22             allFeeds.forEach(function(feed){
23                 expect(feed.url).toBeDefined();
24                 expect(feed.url).toEqual(jasmine.any(String));
25                 expect(feed.url).toBeTruthy();
26             });
27         });
28     });
29 })
```

```
29
30
31     // allFeeds has a name and it's not empty
32     it('has name', function(){
33         allFeeds.forEach(function(feed){
34             expect(feed.name).toBeTruthy();
35         });
36     });

```

AWESOME

Great job with the first test suite! You comprehensively test that the feeds, URLs and names are defined ar

```
37 });
38
39
40     // menu test suite
41     describe('The menu', function(){
42         // menu is hidden by default
43         it('hidden by default', function(){
44             expect($('body').attr("class")).toMatch('menu-hidden');
45         });
46
47         // menu changes visibility when clicked
48         it('changes when clicked', function(){
49             $(".menu-icon-link").click();
50             expect($('body').attr("class")).not.toMatch('menu-hidden');
51
52             $(".menu-icon-link").click();
53             expect($('body').attr("class")).toMatch('menu-hidden');
54         });

```

AWESOME

Nice work testing the visibility of the menu!

```
55 });
56
57     // initial entries test suite
58     describe('Initial Entries', function(){
59         // single .entry element
60         beforeEach(function(done){
61             loadFeed(0, done);
62         });
63
64         it('has at least one entry', function(){
65             expect($('.feed .entry')).length.toBeGreaterThan(0);

```

AWESOME

Awesome job using `$('.feed .entry')` to target the correct elements 🍀

```
66         });
67     });

```

```
68
69
70 // new feed selection test suite
71 describe('New Feed Selection', function(){
72     // loadFeed changes content
73     beforeEach(function(done){
74         loadFeed(0, done);
75     });
76
77     it('changes content', function(done){
78         const content = $('.feed').html();
79
80         loadFeed(1, function(){
81             expect($('.feed').html()).not.toEqual(content);
82             done();
83         });
84     });

```

AWESOME

Nicely done!

```
85     });
86 })();
87
```
